## **DETAILED ACTION**

This application is a CIP of 09/654,652, now issued as US Patent No. 7,037,696. Claims 1-28 are pending.

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-14, drawn to a polypeptide having glucanase activity, classified in class 435, subclass 209.
- II. Claims 15-28, drawn to a polynucleotide encoding a glucanase, vector and host cell comprising said polynucleotide and a method of producing the glucanase, classified in class 435, subclass 252.3.

Further, applicants are required to elect <u>ONE</u> polypeptide sequence selected from SEQ ID NO:7, 8, 9, 12, 13, 14 and 15 and/or <u>ONE</u> polynucleotide sequence encoding the polypeptide of SEQ ID NO:7, 8, 9, 12, 13, 14 or 15.

This is not an election of species. The polypeptides of SEQ ID NO: SEQ ID NO:7, 8, 9, 12, 13, 14 and 15 and polynucleotides encoding SEQ ID NO:7, 8, 9, 12, 13, 14 and 15 are patentably distinct inventions. Each of the polypeptides and encoded polypeptides have different structure and function, such as substrate specificity, and each of the polynucleotides have different structure and/or function. Each of the

Application/Control Number:

10/773,455 Art Unit: 1652

polynucleotides and polypeptides are independent chemical entities and require independent search in the patent and non-patent literature.

The inventions are distinct, each from the other because of the following reasons:

The products groups I-II are patentably distinct inventions because group I is drawn to a polypeptide and group I is drawn to a polypucleotide.

The polynucleotide of group II and polypeptide of group I are patentably distinct inventions for the following reasons. Polypeptides, which are composed of amino acids, and polynucleotides, which are composed of purine and pyrimidine units, are structurally distinct molecules; any relationship between a polynucleotide and polypeptide is dependent upon the information provided by the nucleic acid sequence open reading frame as it corresponds to the primary amino acid sequence of the encoded polypeptide. While a polypeptide of Group I can made by methods using some, but not all, of the polynucleotides that fall within the scope of group II, it can also be recovered from a natural source using by biochemical means. For instance, the polypeptide can be isolated using affinity chromatography. For these reasons, the inventions of groups I and II are patentably distinct.

Furthermore, searching the inventions of groups I and II together would impose a serious search burden. In the instant case, the search of the polypeptides and the polynucleotides are not coextensive. The inventions of Groups I and II have a separate status in the art as shown by their different classifications. In cases such as this one where descriptive sequence information is provided, the sequences are searched in

Application/Control Number:

10/773,455 Art Unit: 1652

appropriate databases. There is search burden also in the non-patent literature. Prior to the concomitant isolation and expression of the sequence of interest there may be journal articles devoted solely to polypeptides which would not have described the polynucleotide. Searching, therefore is not coextensive.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yong Pak whose telephone number is 571-272-0935. The examiner can normally be reached 6:30 A.M. to 5:00 P.M. Monday through Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ponnathapu Achutamurthy can be reached on 571-272-0928. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 571-272-1600.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should
